ATHLETE PERFORMANCE SUMMARY

Florian DESCAMPS's race data fits an all round athlete, driven by a descent mastery of 12.09 km/h against a vertical power of 941.4 m/h. The clearest performance cost came from endurance, which declined furthest as the race progressed. Maybe due to starting faster than anyone 4.12 min/km. Fatigue resistance was moderate: VPI fell 21.3% and DMI fell 20.3% between race halves, alongside a 22.9% slowdown in effort pace. Position tracked this closely, improving from #9 to a final #2, with a best of #1 reached along the way.

KEY TAKEAWAYS

- 01** No big difference between VPI & DMI during the race.
- 02** Highest Vertical Power Index (VPI) recorded at km 112.
- 03** Starting faster than the rest of the field, maybe lead to a lower ER by the end of the race.
- 04** Not a single bad segment in all race.
